

QJS Powerboost

Having the correct rinse is critical to the effectiveness and success of your cleaning system, and indeed your factory site overall.

With today's need for minimising waste, water and energy usage yet ever increasing hygiene demands, there is a Q2 rinse option to exactly suit your specific needs.

QJS PowerBoost

The Powerboost are pumps mounted on skids for installation in a plant room area. These units take hot or cold water and boost the pressure, delivering it via pipework to Q2 satellites mounted in the production area.

Pressures stated below are approximate and will vary depending on water supply configuration.
